

Re-Entry / No-Go Re-Entry Guides

Description

Wireline Re-entry Guides are used for safe re-entry of wireline tools from the casing into the tubing string. Threaded on the top end only, they attach to the bottom end of the production string and are designed with a beveled guide and increased internal diameter. Certain tools such as tubing end locators or sample bailers are designed to be run out of the tubing to perform their tasks. The Wireline Re-entry Guide, with its internal bevel, guides the wireline or slickline tool string back into the tubing.

Adding a Single or Double brass bar stock to the Re-entry Guide was introduced to the industry to assist in preventing unrecovered Frac balls from blocking the flow of fluids thru the tubing.

An additional innovation by Armor Tools was the development of the No-Go Re-entry Guide. This development fulfills the need for a flow control device that aids in stopping unrecovered Frac balls and gives the well operator the ability to install recorders on the bottom side of the tubing string.

Features & Benefits

- ✓ One piece construction.
- ✓ Special clearance and L80 standard stock
- ✓ Brass Bar stops are easily sheared with coil tubing
- ✓ Multiple no-go sizes to meet your well's requirements
- ✓ Custom sizes and configurations available upon request
- ✓ Available with Mule Shoe design to aid tubing deployment in deviated wells

27. Re-Entry Guide/Mule Shoe: 3-1/2 EUE – SC c/w 2 brass bar stop

All Armor Tools Brass Bar Stops are 5/32”s material

EXAMPLE: Multiply Shear Force (Brass 5/32 (760psi)) for 2 points of shear = 1520psi of shear force

Custom sizes can be used upon request
